

Claims Preparation

High Speed Rail Link, Taiwan

PROJECT

The new high speed rail link was an ambitious construction project to connect both sides of the Island of Taiwan. It involved the wholesale construction of a rail link including elevated sections, stations and goods yards.

QUALSURV INVOLVEMENT

QUALSURV consultants were commissioned by contractors working on civil engineering aspects of the rail line and a new station to prepare claims.

We provided the expertise necessary to research and prepare claims submissions against the developer for delays and earthquake damage.

Our work provided the contractors with detailed information that considered the issues, together with time and quantum effects, thereby providing an accurate summary of claims entitlements.
