Q7 Offshore Wind Park bv - Holland

PROJECT

Holland's largest offshore wind farm was completed in June 2008 and consists of 60nr 2MW turbines located 23km off the Dutch coast in up to 23m of water. The Offshore Wind Park Q7, renamed Princess Amelia on opening, is a joint project of sustainable energy group Econcert, investment company Energy Investments Holding and utility Eneco. The project owners contracted marine contractor Van Oord to construct the foundations for the offshore wind farm and provide the electrical infrastructure. A separate contract was placed with world leading turbine manufacturer Vestas, to supply and install the towers and wind turbines.

QUALSURV INVOLVEMENT

QUALSURV provided specialist contract and commercial advice on behalf of the employer throughout the course of the construction phase of the project including agreement of variations, dispute resolution and critical path delay analysis.
